

## Industrial Grade High Purity Red Garnet Abrasive Blasting Media For Sandblasting, Polishing

## **Specifications :**

Price	Contact Us
Place of Origin	Shandong, China
Payment Terms	T/T, L/C, Western Union, etc.
Delivery Detail	10-25 Working Days.
Keyword	Garnet Sandblasting

## Detail Introduction :

## Garnet Abrasive Blasting Media

Product and Applications

Garnet is a natural mineral abrasive which is irregularly shaped with polished edges, it contains no heavy materials and has a low level of free silica. Because garnet is very heavy and hard for a mineral abrasive it accomplishes a fast cleaning or cutting rate. Our garnet is the abrasive of choice for water jet cutting and blasting applications. Some of the advantages of garnet are; fast cleaning and cutting, relatively low dust generation as compared to copper- or coal slag, environmental friendly and re-usability.

Chemical composition

AI2O3	16-21%
Fe2O3	27-32%
SiO2	35-38%
MgO	4.5-6%
CaO	2-9.5%
TiO2	1-3%

Physical properties Grain Shape : Angular Colour : Red / Pink Hardness : 7,8 - 8,00 Mohs Bulk density : 2,30 g/cm3 Specific Gravity : 4,10 g/cm3 Chlorides : < 30 ppm Conductivity : < 250 µS/cm Packaging 25 kgs/bags 40 bags / big bag or pallet 1000 kgs / big bag
