Blades 99505035G

Specifications :

Price	Contact us
Place of Origin	China
Min.Order Quantity	1
Payment Terms	L/C, T/T, Paypal
Supply Ability	1000
Delivery Detail	3days--7days

Detail Introduction :

Blades are one of the most versatile and common tools in a tradesman's arsenal. There are many different types of blades, each suited for specific purposes. Here is a look at some of the most commonly used blades:

Hammer Blades: Hammer blades are typically used to hit nails, screws or other objects. They have a flat surface on one side which is great for striking an object with precision.

Screwdriver Blades: Screwdriver blades are designed to drive screws into wood or other materials. They usually have a serrated edge which helps grip the screw head and prevent it from turning.

Chisel Blades: Chisel blades are typically used to shape wood or other materials. They come in a variety of shapes and sizes and can be sharpened on both sides.

Types of blades

Blades are one of the most common and versatile tools in the workshop. Their ubiquity has given them a reputation for being dangerous, but this is not always the case. Blades can be used for a wide variety of purposes, from cutting wood to slicing through meat. Here we will look at the different types of blades and their applications.

There are two main types of blades - fixed and adjustable. Fixed blades tend to have a longer blade length, while adjustable blades can be shortened or lengthened to suit your needs.

Our Company:

Zibo Yalong Abrasive Co., Ltd, established in 2007, based in Zibo City, Shandong Province, is a leading manufacturer of metallic abrasives. We produce high quality Steel Shot, Steel Grit, Steel Cut Wire Shot, Stainless Steel Cut Wire Shot etc.
