Place of Origin	China
Min.Order Quantity	1
Supply Ability	1000

Detail Introduction :

The Side Liner Protection Plate

The side liner protection plate is a type of impact protection device that helps protect the driver and passenger from injuries in the event of a collision. It is typically installed on the side of a vehicle near the door, and it uses airbags to help protect occupants in the event of a crash.

Side liner protection plates are designed to absorb energy during a collision, helping to protect occupants from injury. They work by deploying airbags in the event of a crash, which helps to restrain passengers inside the vehicle. This prevents them from being thrown out or across the interior of the car, which can lead to serious injuries.

Side liner protection plates are typically installed on vehicles near the doors, which makes them convenient for use in collisions. They also use airbags as ammunition against objects that may enter into or strike the car during a collision. This means that side liner protection plates are effective at protecting both drivers and passengers in most crashes.

Our Company:

Zibo Yalong Abrasive Co., Ltd, established in 2007, based in Zibo City, Shandong Province, is a leading manufacturer of metallic abrasives. We produce high quality Steel Shot, Steel Grit, Steel Cut Wire Shot, Stainless Steel Cut Wire Shot etc.
