Detail Introduction :

Features of Stainless steel grit g50:

- RECYCLABILITY

The low friability of Stainless steel grit g50 allows it to be recycled hundreds of times. Unlike mineral or slag abrasives, Stainless steel grit g50 will not completely shatter when it hits a surface, keeping its relative size. Recycling Stainless steel grit g50 increases profitability by reducing abrasive consumption, and shipping, cleanup, and disposal costs.

- INCREASED PRODUCTION

Stainless steel grit g50's higher bulk density and high hardness results in more energy being transferred to the work surface than mineral or slag abrasives, easily removing thick coatings, heavy rust, and mill scale. Stainless steel grit g50's uniform particle size provides consistent coverage and surface finish, increasing production rates.

- LOW DUSTING

Stainless steel grit g50's durability and low friability produce lower dust levels than most mineral or slag abrasives. Low dust levels improve the operator's visibility of the work surface, increasing production rates. Lower dust levels also reduce cleanup costs on the job site.
