Detail Introduction :

Steel grit for sand blasting

Steel Grit is an angular metallic abrasive produced by crushing bearing steel . Steel Grit is used for descaling, coating and corrosion removal, and surface etching. The angular particle shape provides a fast cleaning rate and an angular surface profile.

Steel Grit is tempered to three different hardnesses. The hardest material GH, is designed for use exclusively in air blasting equipment. The two softer materials, GL and GP, may also be used in centrifugal wheel blast equipment.
