

Silver Bright Color Steel Grit - steel grit g40 High Carbon Steel Grit For Abrasive Refractory Industry

Specifications :

Price	Contact Us
Place of Origin	Shandong, China
Payment Terms	T/T, L/C, Western Union, etc.
Delivery Detail	10-25 Working Days.
Keyword	Steel Grit Blasting Media

Detail Introduction :

Steel Grit - High carbon steel grit

Three types of grits as below:

- 1) GP grits with normal hardness ranging from 42-50 HRC. The edges diminish with time.
- 2) GL grits with hardness ranging from 50-60 HRC. The edges diminish with time and become round after few operations.
- 3) GH grits with hardness ranging from 60-66 HRC. Used for marble & granite cuttings and finishing. Being hardened, the edges remain sharp throughout the process and for a longer time.

Specification:

Product	STEEL GRIT GH/GL/GP10-120	
Chemical Composition %	C	0.85-1.20
	Mn	0.40-1.20
	Si	0.40-1.20
	S	?0.05
	P	?0.05
Hardness (HRC)	60-66(GH) 50-60(GL) 42-50(GP)	
Density (g/cm3)	7.4	
Metallographic Structure	Even tempered martensite
